

No Avoidable Surprises Reliability Accelerator

A practical capability accelerator for reliability, maintenance and frontline teams who need fewer repeat failures and stronger closure discipline.

WHERE IT FITS

Asset Performance

Used inside diagnostics, sprints and embedded support.

SUPPORTING CAPABILITY

Training plus live application for reliability execution

This is not generic reliability training. Teams learn the method by applying it to live bad actors, defects, weak signals and reliability decisions.

Use when...

- Bad actors and repeat failures keep returning
- RCA and defect elimination quality is inconsistent
- Reliability processes exist but are not applied with discipline
- Teams need common language and practical routines

What it installs

- Golden thread from weak signal to verified closure
- Bad actor review and defect elimination routine
- RCA quality and action-effectiveness discipline
- Role-based reliability leadership practices

Typical outputs

- Training and application workshop pack
- Live bad actor / defect action set
- Reliability response and closure checklist
- 90-day reliability execution plan

Best paired with / how used

- Asset Performance Diagnostic and 90-Day Sprint
- Risk & Opportunity Cadence for MTO rhythm
- Human Reliability for frontline intelligence
- CMMS / SAP and planning discipline improvements

Next step

Use as a focused training-and-application module inside Asset Performance work to turn reliability concepts into visible execution.
